Sustainable Food Service
Products

Hi, I'm Lauren Rice, founder of Plastic Detox,

We are a women-owned business dedicated to sustainable solutions for cafés, restaurants, and hospitality teams. Our personal, hands-on approach sets us apart, and sustainability is at the core of everything we do.

We're passionate about helping businesses reduce plastic waste and minimize pollution with practical, effective solutions. In recognition of our efforts, Plastic Detox has been honored by the Colorado Green Business Network for sustainability in 2023, 2024, and 2025.

Every product we offer is personally tested by our team to ensure it meets our high standards for quality, performance, and sustainability. We also offer custom printing so businesses can showcase their brand while staying responsible.

Giving back is central to our mission. Through partnerships with SECOR Cares and One Tree Planted, we support local families and communities in need while contributing to global reforestation efforts.

By continuously innovating and expanding our product line, we make it easier for businesses like yours to lead in sustainability without compromising convenience or style.

Thank you for joining us in reducing waste, protecting our planet, and supporting the communities we serve.

—Lauren Rice

The Plastic Detox Difference

Our Mission

We help businesses replace single-use plastics with sustainable, scalable solutions. Reducing environmental harm without compromising convenience.

Our Vision

We envision a world where businesses lead the way in sustainability by choosing plastic-free solutions that protect both people and the planet. Through continuous innovation and expansion of our product line, we make it easy to break free from plastic products.

Compostable, Biodegradable, and Plastic Products: What's the difference

Category	Compostable Product	Biodegradable Product	Plastic Product
Definition	Breaks down into nutrient-rich soil in specific conditions (ex. industrial or home composting).	Naturally decomposes over time but may leave some residue.	Synthetic material derived from fossil fuels that takes centuries to decompose.
Breakdown Time	Weeks to months (in proper composting conditions).	Months to years, depending on the material and environment.	Hundreds to thousands of years.
Environmental Impact	Very low - adds nutrients back to the soil.	Moderate - depends on the material and conditions.	High - contributes to pollution and plastic waste crisis.
Health Impact	Free from toxins; safe for composting in gardens.	Generally safe but depends on material and additives.	May leach harmful chemicals (ex. BPA, phthalates) into food or water.

Custom Branded Products

Add your logo, colors, or artwork to your packaging to create memorable, sustainable brand moments that customers see, touch, and share.

Packaging is one of the most visible touchpoints your customers have with your brand, and custom, eco-friendly products increase recognition, enhance the customer experience, and provide free marketing every time they are used.

At Plastic Detox, our sustainable materials ensure your branded products elevate your brand while supporting a greener future.

How It Works

1

Choose Your Product

Decide which items you want to customize and start envisioning your design.

2

Create Your Design

Work with our team to develop your design with logos, colors, or artwork so your products feel uniquely yours.

3

Approve & Order

Finalize your design, meet the product-specific Minimum Order Quantities (MOQs), and submit your deposit to begin production.

4

Production & Delivery

Your custom packaging is made to order with high-quality, sustainable materials and shipped directly to your door. If needed, we offer the option to hold inventory for future use.

Supplies that don't contribute to plastic pollution

Our products make it easy for food service teams to go plastic-free without compromising on quality or convenience. Every item we carry is thoughtfully selected for performance, compostability, and environmental responsibility, helping you serve guests sustainably while maintaining the efficiency your business depends on.

Tableware

A top-down view of a minimalist table setting. In the upper center, a white ceramic cup filled with dark coffee sits on a light gray surface. To its right, a golden-brown almond croissant rests on a small, shallow beige plate. Below the coffee cup, another white ceramic cup, this one filled with a lighter brown coffee, is positioned. To the left of this cup, a second almond croissant, topped with a drizzle of dark chocolate, is on a similar beige plate. In the lower right, a large sesame seed bagel sits on a larger, shallow beige plate. A light beige napkin is folded near the top right, and a wooden fork lies on a napkin at the bottom right. The overall aesthetic is clean and modern.
